

VELLORE INSTITUTE OF TECHNOLOGY, BHOPAL

PROJECT REPORT – DIGITAL LITERACY

NAME- MANHA SIDDIQUI

REGISTRATION NO- 25MIB10049

BRANCH- BIOINFORMATICS AND AI

YEAR- 2025-26

COURSE- DIGITAL LITERACY CSE0001

INTRODUCTION

What is this project about?

This project on digital literacy will enable me to learn how to use online tools better and safely, hence improving my ability to participate effectively in today's tech-driven world. In a world where technology is at the center of almost everything, being digitally literate is not only useful; it is, rather, a necessity for success.

One of the most significant takeaways from this project for me was learning that I have the ability to create a professional online presence, including learning how to use tools like GitHub, LinkedIn, and how to communicate professionally through emails. I was able to learn useful skills on how to protect my online presence, including being aware of how to protect myself from cyber threats, among other useful skills, not only theoretically but practically, which I will be able to apply in my academic and professional field.

Why digital literacy is important?

the importance of digital literacy lies in using technology effectively and safely in everyday life. Students can learn, communicate, and access information more effectively through digital literacy. It helps develop a professional presence online and protects against cyber threats, which is incredibly important in today's digitally dependent world.

Task 1 :- Create a Digital Literacy Awareness

Infographic

Tool used - Canva

I used Canva to create an infographic designed to inform students about the digital literacy concept. I included information about understanding digital literacy, digital tools such as Google docs, GitHub and LinkedIn, as well as giving students information regarding safe practices when using the internet such as creating strong passwords and being cautious to not click suspicious links. I also covered maintaining a professional image found online.

What this design shows and difficulties?

I wanted my infographic's content to be concise and clear and look good on the page by breaking each section into sections with heading titles and appropriate visuals. There were many different templates provided by Canva. I found this to be an easier design process than I thought it would be; I believe there were a lot of different creative elements, also. I had a little bit of difficulty getting all of the content elements arranged on one page without creating a crowded feeling on the page, but I struggled with spacing and alignments.

Task 2 :- Build Your Student Digital Portfolio

I have developed my digital portfolio by creating accounts on GitHub, LinkedIn, and Kaggle. These platforms play a crucial role in developing a professional online presence.

On GitHub, I have created an account and added a README file with basic details and interests in learning. GitHub is primarily a site for storage and sharing of projects.

On LinkedIn, I have added details to my profile, such as the college I have attended and the course I have pursued. This platform is of great importance in developing professional networks and opportunities.

I have also created a profile on Kaggle. This platform is of great importance in developing the skills required to be a good data scientist through the application of the learning by doing principle.

Future Plans

I intend to utilize these platforms to enhance my skills and develop a professional online presence. This will be of great importance in the future in terms of internships and job opportunities.

Task 3 :- Explore Coding & Collaboration Platforms

Software used - HackerRank

For this task, I have used HackerRank as my coding platform. In this platform, I have attempted a beginner-level problem titled "Solve Me First." This task has helped me understand coding platforms and provided me with some coding practice. This task has also boosted my confidence in solving coding problems and understand how to solve these problems.

For collaboration, I have used Google Forms to create a "Digital Literacy questions " with five questions. In this quiz, there are both multiple-choice and short answer questions on the topic based. This quiz is also linked to a Google Sheet, which has helped me understand the efficient way of collecting data.

Both these platforms are very useful for to me.

HackerRank can be used to develop coding skills and help to understand where is mistake and help to develop bond with coding language, whereas Google Forms and Google Sheets can be used for efficient collaboration and help to manage other response and feedback . These platforms can be very useful for my academic and professional growth.

Task 4 :- Draft a Professional Email & Etiquette Guide

One example of poor digital communication is when a student sends a rude email to the professor. For example, a student once wrote an email to the professor

stating, "Send me the assignment marks as soon as possible." The student did not use any greeting in the email, which made the professor not only delay the response but also gave the student a bad impression.

This situation could have been handled in a better way if the student had used proper digital communication skills or in a manner that can be more appropriate. For example, the student could have written a formal email requesting the marks in a polite and professional way. By using proper digital communication skills, the student could have created a positive impression.

Task 5: Cybercrime Awareness Case Study & Prevention Guide

Topic: Cyberbullying

The most surprising thing I encountered during my research on cyberbullying is the serious impact it can have on a person's mental health. Earlier, I used to think that jokes or comments posted online did not affect people much and could even be seen as funny from another perspective. However, I have now realized that negative comments online can lead to feelings of loneliness, depression, and even serious mental health issues

Another surprising aspect is that many people do not report such behavior due to feelings of embarrassment or fear. This allows cyberbullying to continue and affect individuals more deeply.

Through this study, I have understood that I need to be more careful about what I say or post online. It is important to consider others' perspectives and be polite and responsible in my online interactions. I have also realized the importance of supporting people who are being bullied online and standing against such behavior. I should avoid engaging in or encouraging any form of cyberbullying.

Conclusion -

This digital literacy project proved to be a great learning experience for me. I realized the importance of interacting with technology in a smart, safe, and responsible way. I gained experience in the use of various technologies such as Canva, GitHub, LinkedIn, Kaggle, and HackerRank. This not only enhanced my skills in the digital world but also helped me to improve my professional demeanour.

This project has also helped me improve my professional demeanour. I have realized the importance of maintaining a positive online presence and communicating effectively in the

digital world. Learning about cyberbullying has made me more careful and considerate of how my online actions can impact others

Overall, this project has boosted my confidence and enhanced my knowledge about responsible behavior in the digital environment.
